1. Description

Sylvin appears to have an extremely shallow atmosphere, compressed by the planet's gravity to extremely high pressure. Mostly super-heated sulfuric acid, this planet's atmosphere is lethal, if a landing were possible.

2. Stats

- DIAMETER: 5414 km
- MASS: 2.539×10^{24} kg
- TERRAIN: unknown
- TEMPERATURE: -160°C/160°C
- ESCAPE VELOCITY: 4.79 km/sec
- SYSTEM: [Hyperion](#)
