1. Description

Initially discovered by the [Gas Mining Guild \(GMG\)](#) in 620 AS, the Planet Kurile exists in the heart of an astronomical anomaly -- a gravitational tidal pool that creates a clear zone in the middle of an otherwise treacherous nebula. The planet itself is entirely covered in [water](#) with a saline content so high that it is toxic to almost all known aquatic life elsewhere in Sirius. Despite this, Kurile pssesses a single native life form, a microorganism that manages to thrive in its otherwise poisonous oceans. [Samura](#) eventually managed to construct a research platform on Kurile as part of an effort to harvest the microorganisms for use as fish food on [Junyo](#) -- an incredible successful initiative.
