1. Description

A medium-sized world of swirling methane clouds locked in a gravitational embrace with its twin, Cerebus. Scientists have been unable to determine how two planets so similar to each other reached their present configuration.

2. Stats

- DIAMETER: 12,190 km
- MASS: 5.12×10^{24} kg
- TERRAIN: Barren
- TEMPERATURE: -86°C to -42°C
- ESCAPE VELOCITY: 12.83 km/sec
- SYSTEM: [Sigma-19](#)
