1. Description

If you thought it could get no more curios -- but this planet is populated by apes and monkeys, SPEAKING MONKEYS ! No really ... they do. It seems obvious that somebody is trying to fool us. As [The Order](#) claims responsibility for the whole system due to to be charted space anomalies and massive [nomads](#) appearance, it has to be questioned, what they know : were these apes there before discovery, are they part of infamous trans-genetic experiments, are these apes and monkeys running loose? At least they run the planet even though any kind of especially technological trade and transfer is heavily restricted.
