1. Description

Named after the Senior Lieutenant on Von Rohe's fateful expedition, Schutz is a dying planet, slowly being melted by the swelling red giant sun at the system's center. One of only two planets still intact in the system, its surface is convulsed by numerous volcanoes. It serves as a shield for the [Solarius Station](#), protecting it from the intense radiation emitted by the dying sun.

2. Stats

- DIAMETER: 4,972 km
- MASS: 3.0×10^{24} kg
- TERRAIN: Volcanic
- TEMPERATURE: 300°C to 500°C
- ESCAPE VELOCITY: 6.75 km/sec
- SYSTEM: [Omega-11](#)
