1. Description

Hippias is a protoplanet, devoid of life, poisoned by the surrounding radioactive nebula and still accreting more mass from surrounding asteroids.

2. Stats

- DIAMETER: 5,389.9 km
- MASS: 2.527×10^{24} kg
- TERRAIN: Barren
- TEMPERATURE: -87°C to -15 °C
- ESCAPE VELOCITY: 4.77 km/sec
- SYSTEM: [Telosis](#)
