1. Description

> Only fragmentary information has been obtained about this planet, since no landing party or science probe has ever returned from its surface; hence the name, Death. Heated by nearby Sirius, the planet's greenhouse-like atmosphere appears to be a harbour for a variety of microbial life which feeds upon carbonates, and produces [toxic waste](#).

2. Stats

- DIAMETER: 10,779.8 km
- MASS: 5.055×10^{24} kg
- TERRAIN: terrestrial
- TEMPERATURE: -60°C/80°C
- ESCAPE VELOCITY: 9.53 km/sec
- SYSTEM: [Wheel of Sirius](#)
