This is a Nomad infested system were attacks by these aliens is common. Pilots are warned not to go anywhere near the two suns located in the centre of the system, although for those that do, death is quick and quite painless. The whole system comprises of the Ursus Field (radioactive), which is a large sized field of asteroids that could be the result of a large collision of two moons. There are four planets one of which is off of map. Planet Canaan is located south of planet Novis. Scans were unable to reveal the exact nature of the numerous gas fields scattered around the system. They do not appear to pose a serious threat to vessels but progress through them is slower and gas explosions can be expected.

1. Planets

- Planet Novis
- Planet Canaan (*off the map, close to Planet Novis*)
- Planet Epitome
 - Magni (*moon*)
- Planet Shangris

2. Jump Holes
