Vega

- System Info
- System Map

Vega is a System of opportunity. This place is rich in asteroids fields and nebulas which offer mining opportunities and nice views for tourism. However, given that Nomads are still an imminent threat, local government decided to deploy several strategically located minefields. System visitors are therefore advised to use trade lanes and in open space do not rely on autopilot. Especially if you want to fly directly from the X-3043 gate to the local prison station. The Bretonian government recently started building a new space station in Planet Corinth orbit, but this station is yet merely a skeleton. For explorers, it is interesting to note that in local bars rumours abound about the finding of new jump-holes. It is said that the local military forces found new jump-holes when chasing smugglers.

1. Bases & Dockable Planets

(*dockable planets including unsettled moons*)

- Peris Station
- Planet Aventin
    - Karan *(moon)*
    - Ackorr *(moon)*
    - Naim *(moon)*
- Karnak Prison

2. Unsettled Planets & Moons

- Planet Cortez
- Planet Corinth
    - Enos *(moon)*
    - Oldskel *(moon)*

3. Jump Gates

- X-3043

4. Jump Holes

- [Far Point](#)
- [Seltos](#)

5. Wrecks

- [Freya](#)
- [Vindex](#)

6. Specials

- Depot Construction Site *([Planet Corinth](#) orbit)*
