A System with a dominant massive [Neutron Star](#) and a surrounding asteroid field. Travellers should expect not only radiation danger close to the star, but also dense minefields laid into asteroid field surrounding the star. Rumours heard in local bars are telling that the Rheinland fleet used this System for the transfer of huge amounts of material. When they had finished, they laid the minefields to ensure that they could not be followed. The travel path of these military convoys went north of the [Neutron star](#) and ships on their return flight from [Omega-11](#) were returning empty. Cautious exploration is recommended!
