

## H-fuel

A mix of elemental hydrogen, deuterium ( $H_2$ ), and helium-3 ( $He_3$ ), H-fuel can also be mixed with [oxygen](#) in fuel cells to provide [water](#) (via "cracking") and electricity for smaller ships, space stations, and other facilities. H-fuel production is almost totally monopolized by the Kusari who obtain their supplies from the [Gas Miner's](#) Guild before shipping it to storage depots and distribution facilities throughout the colonies.
