

Ship Hull Panels

One of the most important pieces of technology developed during the course of settling the [Sirius Sector](#) has been Ship Hull Panels. These wonders of materials research combine a [Polymer](#) and Hydrocarbon base along with Basic and Super Alloys to create a substance that is light and flexible, while providing insulation from hard vacuum and all but the most intense radiation. [Boron](#) fibers are infused into the panels to endow them with structural rigidity, protecting ships against kinetic impact and high-energy weapons fire.
