Pittsburgh is covered by a single vast desert, broken only by large rocky outcroppings that have yet to be consumed by the sand. Without any ice asteroids in close proximity, the planet was not considered a good candidate for terraforming and remained sparsely populated until a full-scale mineral survey in 650 AS pinpointed deposits of [Boron](#) in the form of borax salts deep within the Corridera Plateau. A mining operation was established on the planet in 660 AS by [Deep Space Engineering](#) to exploit these deposits, and it is now the only raw material extraction facility within Liberty space.
