## 1. Description

Locked in a geosynchronous orbit within the planetary shadow of [Planet Schutz](#), Solarius Station is the sole haven in the dangerous environment of [Omega-11](#). At the heart of the system is a late-stage red giant that releases random radiation storms, fatal to any organic life unfortunate enough to be caught without protection. Despite the hazards, however, the [Omega-11](#) system is also one of the most abundant sources of [Diamonds](#) in Sirius, the valuable gemstones locked in the circle of volcanic asteroids that ring the dying sun. [Daumann Heavy Construction](#) obtained the contract to develop [Omega-11](#) and by 410 AS had managed to finish the construction of Solarius Station -- at the cost of 87 men and women who died "for the greater glory of Rheinland and its people".
