### 1. Description

Locked in a geosynchronous orbit within the planetary shadow of <u>Planet Schutz</u>, Solarius Station is the sole haven in the dangerous environment of <u>Omega-11</u>. At the heart of the system is a late-stage red giant that releases random radiation storms, fatal to any organic life unfortunate enough to be caught without protection. Despite the hazards, however, the <u>Omega-11</u> system is also on of the most abundant sources of <u>Diamonds</u> in Sirius, the valuable gemstones locked in the circle of volcanic asteroids that ring the dying sun. <u>Daumann Heavy Construction</u> obtained the contract to develop <u>Omega-11</u> and by 410 AS had managed to finish the construction of Solarius Station -- at the cost of 87 men and women who died "for the greater glory of Rheinland and its people".
