1. Description

A large gas giant composed mostly of ice [crystals](#). Deep sonar surveys have shown the presence of rare gases in vast frozen fields; however, they are located kilometers beneath the planet's surface making them impossible to collect. The [Cardiff Mining Facility](#) orbits the planet, collecting [beryllium](#) from nearby asteroid fields.

2. Stats

- DIAMETER: 28,312 km
- MASS: 9.92×10^{24} kg
- TERRAIN: N/A
- TEMPERATURE: N/A
- ESCAPE VELOCITY: 15.46 km/sec
- SYSTEM: [Cambridge](#)

Planet Sarum or type unknown
